

Your journey to better health

From everyday health concerns to blood tests, minor surgery and ADHD assessments, our private GPs provide personalised care with fast access to diagnostics in the heart of local neighbourhoods.

You don't have to be a member to book an appointment with one of our experienced GPs. We offer a broad range of services to cover all of your health needs.

OUR SERVICES

ADHD Assessments

Our GPs are specially trained to offer end-to-end care from assessment and diagnosis to ongoing medication management for adults and children. We offer this privately and also as part of the NHS Right to Choose Pathway (18+ only). Our comprehensive approach means all personalised treatment plans are meticulously overseen by Consultant Psychiatrists.

Blood Tests

We offer a full range of individual blood tests as well as bespoke packages based on your health concern. Bloods are taken at the clinic, and results are usually available from 48 hours depending on the test.

Cancer Screening

Our range of in clinic cancer screening checks include PSA tests, breast and cervical screening and skin checks. Additionally, we're able to refer you to our partners for colorectal/bowel cancer screening, mammograms or ultrasound scans for suspected ovarian cancer. As well as testing, our approach also includes assessment of your personal cancer risk and evaluation of lifestyle factors including diet, exercise, smoking, and alcohol consumption.

Children's Health

We can help with a wide range of childhood health concerns - from common illnesses to longer-term physical, developmental or emotional issues. We can help with skin conditions, respiratory problems, allergies, gastrointestinal concerns as well as eye, ear, nose and throat conditions. We also offer assessment and management of ADHD, as well as identifying and managing anxiety and depression.

GP Appointments

With appointments of up to 20 minutes, you'll have dedicated time with your GP to talk through your symptoms, concerns and next steps. These can also be extended to 40 or 60 minutes if you have several concerns you're keen to discuss. Whether you're unwell, have a long standing concern or are being proactive about your health, we can help. Common conditions we can help with include coughs, colds and respiratory illnesses, back pain, muscle and joint pain, skin conditions, anxiety and depression, diabetes and asthma to name but a few.

Health Assessments

Prioritising your health with an annual check-up is a proactive step towards maintaining overall well-being and catching potential health issues early on. Our Essential Health Assessment starts with your medical history followed by a physical examination by the doctor alongside comprehensive blood tests to give you the full picture of your overall health.

Joint Injections

We can administer safe joint injections to help reduce pain and improve movement. This may be in the form of a Steroid injection (reduces inflammation and pain) or Ostenil injection (a hyaluronic-acid non-steroid option to reduce pain and stiffness, particularly in osteoarthritis).

Men's Health

Our specialists appreciate the health needs of men of all ages. Book an appointment if you're concerned about weight, fatigue, hair loss, erectile dysfunction, fertility, muscle loss, urinary tract symptoms or any lumps and bumps including testicular cancer.

Mental Health

Mental health concerns can affect anyone at any time, but you do not have to face them alone. We offer compassionate, confidential personalised support, providing a calm space to understand what you're experiencing and take positive steps forward. If needed, we can also help refer you to the right specialist.

Minor Surgery

We provide expert minor surgical procedures for a variety of skin concerns, including the removal of moles, skin tags, warts and cysts. Every procedure is performed with precision and care, using advanced techniques to minimise discomfort and support optimal healing.

Skin Health

Common skin concerns we can help treat include acne, eczema, psoriasis, rosacea and melasma, as well as those listed under Minor Surgery too.

Vaccinations

We offer seasonal vaccines such as RSV, as well as life courses such as Chicken Pox. We can also administer tailored travel vaccinations depending on your trip.

Weight Management

Your weight loss journey starts with a detailed consultation with one of our experienced GPs. We will discuss your health history, lifestyle, and weight loss goals, and assess any underlying health conditions. For some patients, medical treatments may be recommended such as Mounjaro® (tirzepatide) and Wegovy (semaglutide).

Women's Health

From adolescence through the reproductive years, menopause, and beyond, women's bodies undergo significant changes. Our specially trained Women's Health GPs are on hand to address the specific health concerns of women at every stage of life including contraception, smear tests, perimenopause and menopause support.

Please visit www.welllife-clinic.co.uk for more information and pricing.
